I am writing to apply for the IT Operation Manager position at CUSTOM CAREERS FACTORY GmbH. The role's focus on bridging IT operations, service quality, and continuous improvement aligns with my technical background and structured approach to system management.

Through my professional experience in web development and IT operations, I have developed a solid understanding of IT infrastructure, networks, and technical operational processes. I have worked extensively with Linux servers, Docker containers, Nginx, Apache, and monitoring tools such as Prometheus and Grafana. This technical foundation allows me to effectively oversee service availability, performance, and incident response.

One area that particularly interests me is the coordination of IT services from introduction to stable operation. In my previous roles, I was responsible for deploying and maintaining production systems, monitoring service quality, and managing escalations when issues arose. I have experience analyzing recurring service problems and implementing sustainable solutions. I also worked with external service providers and internal teams to ensure smooth delivery of IT services.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my experience in IT operations and service management can contribute to your team.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
