I am writing to apply for the Senior Full-Stack Engineer role at Skalar. The opportunity to build the future of tax and accounting with AI from the ground up is exactly the kind of greenfield challenge I look for.

My professional experience centers on full-stack development with TypeScript, Next.js, React, and PostgreSQL. I have spent the last several years building and shipping web applications end-to-end, from spec through implementation to deployment. I am comfortable making pragmatic architecture decisions and iterating quickly based on real user feedback.

In previous work, I designed core APIs, data models, and responsive UIs for production applications. I have integrated third-party services, implemented authentication and role-based access control, and optimized database queries for performance. I also have hands-on experience deploying applications using Docker and managing them on Linux servers.

I have integrated AI into my daily workflow, using it not just for autocompletion but to accelerate development and improve code quality. I am product-minded and enjoy working in cross-functional teams where I can contribute to both technical and product decisions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the chance to discuss how I can contribute to building and scaling Skalar.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
