I am writing to apply for the Senior AI Engineer role at Skalar. Your mission to transform tax and accounting through AI-driven automation is exactly the kind of applied AI challenge I want to work on. Building intelligent agents that simplify complex operations for real users is what drives my work.

Through research and development work, I have built AI-powered systems that combine LLM integration, automation, and practical software engineering. I developed an AI-powered financial application that uses OpenAI's latest models to process voice inputs, generate PDF term sheets, and provide intelligent financial assistance. I also built an AI-powered real estate platform with multiple trained AI assistants, role-based authentication, subscription plans, and Stripe payment integration. These projects involved building robust LLM integrations, managing prompts, handling data pipelines, and deploying on cloud infrastructure.

One area that particularly interests me is building core AI architecture from the ground up. In my projects, I have implemented RAG-style workflows, integrated vector-based search concepts, and built systems that process and analyze data intelligently. I am comfortable with Python, TypeScript, and PostgreSQL, and I have experience deploying applications with Docker, AWS, and Nginx. I am eager to influence the AI stack at Skalar and help build the foundation for scale.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for an early-stage opportunity where I can take ownership of AI features end-to-end and grow into a leadership role as the company expands. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Skalar's vision.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
