I am writing to apply for the IT Infrastructure Support Engineer / System- und Netzwerkadministrator position at IntraConnect. Your focus on combining technical quality with customer-oriented service and process automation aligns well with my approach to IT operations.

My professional experience includes deploying and maintaining applications on Linux servers, where I worked extensively with Nginx, Apache, and Docker for containerized environments. I have set up CI/CD pipelines for automated deployments and used monitoring tools like Prometheus and Grafana to track system health and performance. This background gives me a solid foundation for handling 2nd-level support cases and infrastructure troubleshooting.

One area that particularly interests me is the emphasis on standardization, runbooks, and stabilizing IT operations. In my previous work, I documented technical procedures clearly and contributed to team knowledge sharing. I am comfortable working with tickets, prioritizing incidents, and making independent decisions within defined guidelines. My experience with security-related topics, including firewall configurations and secure authentication mechanisms, supports the security-naive operational tasks mentioned in your description.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my technical background and customer-oriented approach can contribute to your team at IntraConnect.

Sincerely,

Md Shahanur Islam Shagor
