I am writing to express my interest in joining Pogo. While I understand there is no specific open role at the moment, I wanted to introduce myself as a Full-Stack & AI Engineer who builds practical, scalable systems across web development, autonomous systems, and cybersecurity.

I have four years of professional web development experience working with Laravel, Next.js, React, Node.js, TypeScript, and MySQL. At Explo-IT, I designed and developed scalable web applications, built RESTful APIs, implemented authentication and role-based access control, and optimized database performance. I also delivered real-time features using WebSockets and deployed applications on Linux servers with Docker and CI/CD pipelines.

On the AI and autonomous systems side, I have more than a year of hands-on experience. I developed a Wireless Vision-Aid for the Blind using YOLOv8n-based object detection, Python, and C++, running fully offline on edge hardware. I also built a Privacy-Preserving Blockchain Framework for autonomous vehicle networks, integrating Zero-Knowledge Proofs and post-quantum cryptography. These projects reflect my ability to work across software engineering, AI, and security domains.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background could contribute to Pogo’s team when a relevant position opens up.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
