I am writing to apply for the Senior Business Analyst position at Upstream Rehabilitation. Your mission to combine technology, data, and innovation to improve patient care and reduce administrative burden is something I find genuinely compelling. I see a strong connection between the cross-functional, SDLC-focused work you described and the engineering experience I have built over the past several years.

Through my professional experience as a Web Developer, I have worked across the full Software Development Life Cycle, partnering with business stakeholders, product teams, and engineering to define requirements, align priorities, and deliver measurable outcomes. I have led initiatives from discovery and scope definition through to delivery, creating clear, actionable deliverables including user stories, process flows, acceptance criteria, and data mapping. This has given me a practical understanding of how to manage evolving scope while maintaining traceability.

One area that aligns directly with this role is my experience collaborating with engineering and QA teams to support sprint planning, UAT, and defect resolution. I have facilitated workshops to analyze current processes, identify gaps, and design improved future-state workflows. I am comfortable communicating status, risks, and decisions to stakeholders and leadership with clarity, and I have experience driving implementation readiness, documentation, and adoption.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
