I am writing to apply for the Assistente de Cadastro position at InBetta. I understand the role involves creative problem-solving and delivering quality results, and I believe my background in full-stack development and system management aligns well with this opportunity.

Through my professional experience as a Web Developer, I have built and maintained scalable web applications using Laravel on the backend and Next.js with React on the frontend. I have worked extensively with MySQL and PostgreSQL databases, designed RESTful APIs, and implemented authentication and role-based access control systems. I am comfortable working across the full stack and delivering reliable, user-focused solutions.

One area that particularly interests me is building systems that are both functional and maintainable. In previous work, I have deployed applications on Linux servers using Nginx and Docker, set up CI/CD pipelines, and managed cloud infrastructure on AWS and Digital Ocean. I am used to handling the entire lifecycle of a project, from development to deployment and ongoing maintenance.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to the InBetta team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
