I am writing to apply for the Applied AI Analyst role at Nymbus. Your focus on building AI-first solutions for the fintech industry, combined with a hands-on approach to prototyping and deployment, matches the kind of work I have been doing.

Through my research and development work, I have more than one year of experience applying AI tools to solve practical problems. I have designed and prototyped AI-enabled workflows using large language models, built automation pipelines, and deployed production systems that improve efficiency and decision-making. This role's emphasis on being a hands-on builder rather than a theoretical analyst is exactly how I prefer to work.

One area that particularly interests me is workflow and process optimization. In previous work, I analyzed existing workflows to identify inefficiencies and redesigned processes for speed and consistency. For example, I built an AI-powered financial application where I integrated OpenAI assistants, automated voice-to-text transcription using AWS Transcribe, and generated PDF term sheets programmatically. This project required structuring ambiguous requirements, building reusable tools, and deploying scalable solutions that reduced manual effort.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and look forward to the opportunity to discuss how I can contribute to Nymbus's Applied AI practice.

Sincerely,

Md Shahanur Islam Shagor
