I am writing to apply for the SSE position at Dutch Technology Frontiers BV. With a strong foundation in full-stack development and a focus on building scalable, production-ready systems, I am confident I can contribute effectively to your engineering team.

My technical experience centers on Laravel and Next.js for full-stack web development, complemented by Node.js, React, TypeScript, and MySQL. Over the past four years, I have designed and delivered applications that handle authentication, role-based access control, payment integration, and real-time communication. I focus on writing clean, maintainable code and optimizing performance at every layer.

In my professional experience as a Web Developer at Explo-IT, I built RESTful APIs, implemented real-time features using WebSockets and Pusher, and deployed applications on Linux servers with Nginx and Docker. I also optimized database queries through Eloquent tuning and indexing, ensuring reliable performance under production loads. One relevant project I developed is a real-time server health monitoring dashboard using React, Node.js, Socket.IO, and Docker, which streams live system metrics to the browser.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills align with the needs of Dutch Technology Frontiers BV.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
