I am writing to apply for the Brand Designer role at Canals. Your work building software that helps wholesale distributors operate more efficiently through automation and AI is genuinely interesting, and I admire the focus on solving real problems for an industry that powers the real economy.

Although my primary experience is in software engineering, I have developed a strong eye for design through years of building user-facing web applications. I am proficient in Figma and have hands-on experience crafting responsive, accessible interfaces using Tailwind CSS, MaterialUI, and modern frontend frameworks. I understand how design systems work from the implementation side and can contribute meaningfully to brand guidelines, templates, and asset libraries.

In my previous work as a Web Developer, I designed and developed full-stack applications where I owned the visual layer end to end. I transformed product requirements into polished, story-driven UIs, built reusable component libraries, and ensured brand consistency across multiple platforms. I am comfortable working with marketers, product managers, and non-designers to translate feedback into clean, effective visuals.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my design sensibility and technical background can support Canals as you expand and refine your brand.

Sincerely,

Md Shahanur Islam Shagor
