I am writing to apply for the Analyst Applications position at Gildan. The opportunity to support inventory management and logistics transactions within a large-scale manufacturing environment is directly relevant to my background in application support and system integrity.

Through my professional experience as a Web Developer, I have developed strong analytical and problem-solving skills. I have worked on maintaining system data accuracy, identifying discrepancies, and executing corrective actions. My experience includes collaborating with cross-functional teams to test and validate system enhancements, as well as creating and maintaining process documentation and knowledge base articles.

One area that particularly interests me is supporting ERP systems and ensuring smooth operational workflows. I have experience working with databases and am comfortable with SQL concepts, which aligns with the willingness to develop SQL knowledge mentioned in the job description. I am organized and capable of managing multiple tasks and priorities effectively.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the IT team at Gildan.

Sincerely,

Md Shahanur Islam Shagor
