I am writing to apply for the IT-Systemadministrator (m/w/d) position at Riege Software. Your focus on building a reliable, secure, and user-friendly IT infrastructure for the logistics industry is something I find genuinely interesting, and I would welcome the opportunity to contribute to your Desktop Operations team.

My technical foundation is built on hands-on experience with Linux server administration, network configuration, and IT security practices. I have worked extensively with Linux, Nginx, Apache, Docker, and cloud platforms such as AWS and Google Cloud. These skills map directly to the responsibilities of managing internal IT infrastructure, maintaining WLAN networks, and supporting security management processes.

In previous roles, I handled user account management, role-based access control, and authentication systems across multiple applications. I am comfortable working with directory services and cloud-based identity tools, and I have practical experience monitoring system health, managing backups, and troubleshooting network issues in production environments. I also have experience with CI/CD pipelines and server deployment workflows, which supports the software management and standardization aspects of this role.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can support Riege Software’s IT operations. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
