I am writing to apply for the IT-Systemadministrator position at siQnet Consulting GmbH. Your focus on modern IT solutions, managed services, and a collaborative team culture stands out to me. I am interested in contributing to your data center operations and customer support.

Through my professional experience, I have developed a strong foundation in Linux server administration, containerization, and web server management. I have worked extensively with Linux, Docker, Nginx, Apache, and CI/CD pipelines to deploy and maintain production systems. This technical background directly supports the responsibilities of managing servers, performing security rollouts, and providing support.

In my previous work as a Web Developer, I was responsible for deploying and maintaining applications on Linux servers, configuring Nginx and Apache, and setting up Docker-based environments. I also implemented authentication systems and security measures, including role-based access control and secure API integrations. These tasks required a practical understanding of server health, network connectivity, and system reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to siQnet Consulting GmbH.

Sincerely,

Md Shahanur Islam Shagor
