I am writing to apply for the Microsoft Security Consultant (m/w/d) position at hubside - Die Recruitingwerkstatt. My work in software engineering has increasingly focused on cybersecurity, secure system design, and resilient infrastructure, which aligns well with the responsibilities of this role.

In my professional experience as a web developer, I have implemented authentication systems, role-based access control, and secure payment integrations. These projects required a solid understanding of security best practices, data protection, and compliance considerations. I have also worked with Linux servers, Docker, Nginx, and monitoring setups, which supports the technical service ownership and security operations aspects of this position.

Through research and development work, I have explored secure communication protocols, encryption techniques, and privacy-preserving architectures. I designed systems that prioritize data integrity and resilience against common attack vectors. This experience has given me a practical understanding of threat landscapes, vulnerability management, and the importance of proactive security measures.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cybersecurity and secure systems can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
