I am writing to apply for the Java Tech Lead position at GETAWAY. Your end-to-end car-sharing platform, serving customers across Germany, Austria, and Spain, represents the kind of technically ambitious product I want to help build and scale.

My professional experience has been centered on full-stack development and backend engineering. I have worked extensively with PHP/Laravel, Node.js, and Go to build modular, production-grade systems. While my primary backend language is not Java, I bring strong software engineering fundamentals, experience with complex system architecture, and a track record of delivering reliable, scalable platforms.

One area where I can contribute immediately is your cloud infrastructure and CI/CD pipeline. I have hands-on experience with AWS services including EC2, S3, and CloudWatch, and I have set up and maintained CI/CD pipelines using GitLab CI and Docker. I am also comfortable working with MongoDB in production environments and have experience migrating data between storage systems. Your focus on improving monitoring, alerting, and incident response aligns with work I have done using Prometheus, Grafana, and custom health monitoring dashboards.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my engineering background can support GETAWAY’s next growth phase.

Sincerely,

Md Shahanur Islam Shagor
