I am writing to apply for the Spezialist:in Qualitˆtsmanagement position at Solvis GmbH. Your focus on building a comprehensive quality system across product lines and driving a "Quality First" culture aligns with my approach to engineering and process improvement.

Through my work in software development and system monitoring, I have developed a structured, data-driven approach to quality. I have built real-time dashboards that track system health, availability, and performance metrics, enabling teams to identify issues early and make informed decisions. This experience directly supports the role's emphasis on developing and maintaining dashboards for transparent quality and process metrics.

One area that particularly interests me is the definition of QS-gateways and test specifications along the entire product lifecycle. In previous projects, I have implemented monitoring pipelines and automated checks that catch problems before they reach production. I am comfortable working across teams to define quality standards and ensure they are followed from design through deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to Solvis GmbH's quality management goals.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
