I am writing to apply for the Team Lead Accounting DACH position at YOC AG. While my professional background is in software engineering rather than accounting, I bring strong analytical capabilities, process optimization experience, and a structured approach to problem-solving that I believe would be valuable in this role.

Through my work as a full-stack developer, I have developed expertise in building complex systems that require meticulous attention to data integrity, accurate reporting, and efficient workflows. I have experience designing and implementing role-based access control systems, managing database schemas, and creating dashboards for real-time monitoring. These skills translate well to accounting environments where accuracy, traceability, and process standardization are critical.

In my previous roles, I have led projects involving system optimization, automation of repetitive tasks, and integration of third-party services. I am comfortable working with cross-functional teams, communicating with stakeholders, and taking ownership of deliverables from start to finish. I approach problems methodically and focus on building solutions that are both reliable and maintainable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical mindset and process improvement experience could contribute to YOC AG’s accounting team.

Sincerely,

Md Shahanur Islam Shagor
