I am writing to apply for the Senior Cloud & AI Architect role at TEQWERK GmbH. The opportunity to design cloud and AI architectures from concept to scalable reality aligns directly with the kind of technical work I enjoy most.

My experience spans cloud infrastructure, AI system integration, and full-stack development. I have worked with AWS, Google Cloud, Docker, and Kubernetes to deploy and manage production systems. I have also built AI-powered features using OpenAI and Replicate APIs, integrating them into real applications with secure authentication, payment flows, and real-time data processing.

One area that particularly interests me is translating business requirements into technical solutions. In previous projects, I have taken complex stakeholder needs and turned them into working architectures that balance performance, security, and maintainability. I have also set development standards and best practices within teams, ensuring long-term code quality and operational reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in cloud and AI architecture could contribute to TEQWERK’s projects.

Sincerely,

Md Shahanur Islam Shagor
