I am writing to apply for the Praktikum Spatial & Retail Design position at LIGANOVA GmbH in Berlin. Your focus on creating immersive brand experiences in three-dimensional space aligns with my interest in building systems that bridge the digital and physical worlds.

Although my formal training is in software engineering, I bring a strong foundation in visual thinking and AI-powered design tools. Through my research and development work, I have built computer vision systems using YOLOv8 for real-time object detection, which required precise spatial reasoning and an understanding of how visual information translates into actionable outputs. I also use Figma regularly for UI/UX design and prototyping, and I am comfortable working with rendering and visualization workflows.

One area that particularly interests me is your use of innovative AI tools like Midjourney for rapid ideation. I have practical experience integrating AI APIs into production systems, including OpenAI and Replicate, for image processing and content generation. This technical background allows me to quickly adopt and experiment with new creative tools while understanding their underlying capabilities and limitations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I am structured, self-driven, and solution-oriented, and I am eager to bring my analytical mindset to your spatial design projects.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills can contribute to the Creative League at LIGANOVA.

Sincerely,

Md Shahanur Islam Shagor
