I am writing to apply for the Senior Controller (gn) - Consumer Goods position at Argus Search GmbH. While my professional background is in software engineering and data systems, I bring strong analytical capabilities, a structured approach to problem-solving, and experience building data-driven reporting tools that support management decisions.

In my work as a full-stack developer, I have designed and maintained systems that track, analyze, and report on key metrics in real time. I built monitoring dashboards that stream live system health data, created financial reporting modules for a personal finance platform, and developed role-based access control systems that ensure data integrity and security. These experiences have given me a solid foundation in working with numbers, identifying trends, and presenting actionable insights.

One area that particularly interests me is the process of turning raw data into clear, decision-ready reports. I have experience working with MySQL, PostgreSQL, and MongoDB to structure data efficiently, and I have built custom reporting interfaces using React and Next.js. I am comfortable analyzing variances, preparing presentations, and collaborating with cross-functional teams to ensure data quality and plausibility.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application. I look forward to the opportunity to discuss how my analytical and technical skills can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
