I am writing to apply for the Data Analyst position at Work Force Nexus. The opportunity to work with data in a structured, analytical capacity aligns well with my technical background and problem-solving approach.

Through my work as a full-stack developer, I have developed strong data handling skills across multiple database systems including MySQL, PostgreSQL, and MongoDB. I am comfortable writing complex queries, cleaning datasets, and extracting meaningful insights from raw information. My experience building RESTful APIs and managing data flows between frontend and backend systems has given me a practical understanding of how data moves, transforms, and can be used to drive decisions.

In previous projects, I have worked extensively with data processing and analysis. For example, in developing the AI Powered Financial App, I integrated data from Google Sheets, processed it through OpenAI's models, and generated PDF reports automatically. This required careful data validation, transformation, and output formatting. I also built real-time server monitoring dashboards that tracked system metrics and visualized performance data, further strengthening my ability to work with structured data in production environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical and technical skills can contribute to the Work Force Nexus team.

Sincerely,

Md Shahanur Islam Shagor
