I am writing to express my interest in the Assistant ARFF position at Adani Airport Holdings Ltd. While my professional background is in software engineering and autonomous systems rather than firefighting operations, I bring a strong foundation in real-time monitoring, emergency response coordination, and system reliability that could support airport safety and engineering teams.

Through my work on UAV and autonomous systems projects, I have developed expertise in real-time data processing, system monitoring, and secure communication protocols. I built a real-time server health monitoring dashboard that tracks system availability and latency, streaming live metrics to operators using Socket.IO. This experience has given me a disciplined approach to operational readiness, incident documentation, and maintaining detailed logs for compliance purposes.

I have also worked extensively with Linux servers, Docker containers, and CI/CD pipelines, ensuring systems remain operational under varying loads. My experience coordinating with cross-functional teams during development and deployment cycles has prepared me to collaborate effectively with airport operations, engineering, and emergency response teams.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background could contribute to Adani Airport Holdings Ltd’s safety and operational excellence.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
