I am writing to apply for the Card Fraud Specialist position at Nymbus. Your focus on protecting financial assets with an AI-first mindset and a remote-first culture aligns well with my background in building secure, data-driven systems.

While my professional experience is rooted in software engineering, I have developed strong skills in structured investigation, documentation, and decision-making through building complex systems. I have worked extensively with authentication, role-based access control, and secure payment integrations in Laravel and Node.js environments. These systems required careful attention to data integrity, accurate logging, and adherence to strict workflows.

A relevant example is my work on the Multivendor E-commerce Management Ecosystem, where I implemented role-based access control, secure payment flows, and real-time notifications. This project required managing concurrent user actions, maintaining accurate transaction records, and ensuring data consistency across multiple stakeholders. The discipline of structured case management and documentation in that environment directly applies to managing dispute lifecycles and investigation workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my attention to detail, structured approach to problem-solving, and commitment to accuracy would make me a valuable addition to your fraud operations team. I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with this role.

Sincerely,

Md Shahanur Islam Shagor
