I am writing to apply for the (Senior) IT- / Solution Architect (m/w/d) - Consulting position at EWERK GROUP. Your focus on transforming complex IT landscapes in the KRITIS sector, combined with a modern and collaborative work culture, aligns with my experience in building secure, scalable, and maintainable software architectures.

Through my professional experience as a Web Developer, I have designed and developed full-stack applications using Laravel, Next.js, React, and Node.js. I have worked extensively with cloud platforms (AWS, Google Cloud), containerization (Docker), and CI/CD pipelines to deliver production-ready systems. This background gives me a solid understanding of modern technology stacks, microservices, and distributed system patterns that are essential for solution architecture.

One area that particularly interests me is evaluating and validating technology choices for complex IT environments. In previous work, I have been responsible for architecting RESTful APIs, implementing role-based access control, optimizing database performance with MySQL and PostgreSQL, and ensuring security through authentication mechanisms and secure deployment practices. I have also conducted architecture reviews focused on scalability, reliability, and maintainability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to EWERK GROUP’s consulting projects.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
