I am writing to apply for the AI Visual Content Creator position at PAJ UG. Your work in GPS tracking and the emphasis on AI-first content creation caught my attention. The idea of using AI tools as the primary production method rather than a supplement aligns with how I approach building intelligent systems.

Through my work as a Full-Stack and AI Engineer, I have developed practical experience integrating AI into real-world applications. I have built AI assistants using OpenAI's latest models, implemented image processing pipelines with Replicate API, and developed systems that combine AI with backend infrastructure. This experience has given me a strong understanding of how to structure prompts, evaluate model outputs, and build repeatable workflows that produce consistent results.

One area that particularly interests me is the emphasis on experimentation and workflow optimization. In previous projects, I have worked with multi-step prompt chains and integrated AI tools into production environments. I am comfortable testing different models, documenting findings, and iterating based on output quality. I understand the importance of brand consistency and data privacy when using AI tools at scale.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering and content workflows can contribute to PAJ's creative team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
