I am writing to apply for the Shopify Full Stack Developer position at Bearpaw GmbH. Your focus on building a robust Shopify infrastructure with custom integrations and ERP connectivity matches the kind of technical work I enjoy solving.

In my professional experience as a Web Developer, I have worked extensively with backend technologies including Node.js, PHP (Laravel), and REST APIs. I have built and maintained API integrations between different systems, managed MySQL databases for structured data handling, and deployed applications on Linux servers using Nginx and Docker. This backend foundation allows me to work comfortably with Shopify's API layer and ERP system integrations.

One area that particularly interests me is building reliable data pipelines and automation between systems. I have experience implementing authentication systems, role-based access control, and third-party service integrations. I am used to working independently, structuring my own tasks, and documenting my work clearly so that others can understand and maintain it without relying on undocumented knowledge.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my backend and integration experience can contribute to your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
