I am writing to apply for the Product Manager, Delivery Promise role at Wolt. The challenge of balancing precise delivery estimates with real-world operational complexity is exactly the kind of problem I enjoy solving.

My professional experience has been centered on building and shipping products that require close coordination between engineering, design, and operations teams. I have worked on full-stack applications where I defined requirements, prioritized features, and ensured that technical decisions aligned with business goals. This has given me a practical understanding of how to translate high-level objectives into measurable outcomes.

What stands out to me about this role is the combination of logistics and machine learning. I have worked with AI models and data pipelines in previous projects, which gives me a solid foundation for collaborating with the data science and engineering teams on optimizing delivery estimates. I am comfortable discussing technical trade-offs and ensuring that product decisions are grounded in both user needs and operational realities.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident I can contribute to Wolt’s mission of delivering reliable and delightful customer experiences. I have attached my CV for your review and welcome the opportunity to discuss how my background aligns with the needs of the Delivery Promise team.

Sincerely,

Md Shahanur Islam Shagor
