I am writing to apply for the Full-Stack Software Engineer position at Gratitude Jobs Ahead HR INC to work on the ProAKT banking platform. Your focus on developing a multi-language, client-server desktop application with hardware integration and secure banking protocols is a technical challenge I find genuinely interesting.

My professional experience includes C++ and C# development, Python API layers, and PostgreSQL database work. I have built REST APIs and worked with multi-threaded programming patterns. Through my work on real-time monitoring dashboards using Node.js, Express, and React, I understand the importance of responsive, event-driven systems for mission-critical operations.

One area that particularly interests me is hardware abstraction and device integration. I have experience working with hardware communication protocols through projects involving Raspberry Pi, ESP32, and NVIDIA Jetson Nano, where I developed Python-based device handlers and real-time data pipelines. This background gives me a practical understanding of the challenges involved in creating Python device handlers for cash dispensers, card readers, and other peripherals.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the ProAKT platform team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
