I am writing to apply for the UX Designer (Mobile Apps) freelance position at Dr. Ansay Ltd. Your mission to bring digital healthcare into a native mobile experience is a compelling challenge, and I am interested in contributing to the design of the app that will shape this next chapter.

What stands out to me is the emphasis on designing for real impact rather than perfection. My work has consistently focused on building functional, user-centered interfaces that solve real problems. I have experience designing screens and flows for both iOS and Android, applying platform-specific guidelines to ensure native look and feel. I am comfortable working directly with developers and product managers throughout the design-to-development process.

Through hands-on project development, I have built and designed full-stack mobile applications using React Native and Flutter, where I was responsible for the entire UI/UX pipeline from wireframes and prototypes to final developer handoff. I have worked with tools like Figma for design and prototyping, and I understand how to balance user needs with technical feasibility. I document design decisions clearly and iterate based on feedback and testing.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and portfolio for your review. I would welcome the opportunity to discuss how I can contribute to the Dr. Ansay mobile app experience.

Sincerely,

Md Shahanur Islam Shagor
