I am writing to apply for the Strategy & Operations Associate role at yasp.ai GmbH. Building a compiler that uses agentic AI for advanced optimization is the kind of deep-tech challenge that interests me, and I see a clear connection between my technical background and the operational ownership this role demands.

My experience spans full-stack development, AI integration, and system architecture, but what has defined my work is the ability to operate across boundaries. I have worked directly with business stakeholders, coordinated with engineering teams, and taken ambiguous requirements through to delivered products. This has required me to translate leadership decisions into execution plans, maintain clear timelines, and surface risks early rather than waiting for problems to escalate.

One area that particularly interests me is the operating cadence described in the role. In my previous work, I owned planning cycles and follow-ups for multiple concurrent projects, ensuring that technical and business priorities stayed aligned. I am comfortable working without predefined structures and prefer to create clarity rather than wait for it.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to yasp’s growth.

Sincerely,

Md Shahanur Islam Shagor
