I am writing to apply for the Senior Java- und TypeScript-Entwickler position at Wavestone Germany AG. Your project involving the ART Kern DFI and railway operations software development presents an interesting technical challenge, and I would like to contribute my experience in TypeScript and React to your team.

Through my professional experience as a Web Developer, I have worked extensively with TypeScript and React to build scalable, production-grade applications. I have developed responsive user interfaces, integrated RESTful APIs, and implemented role-based access control systems. My work has consistently focused on writing clean, maintainable code and delivering reliable software solutions.

In previous roles, I have built full-stack applications using modern JavaScript frameworks, including Next.js and React. I have experience with database design, API development, and deploying applications on Linux servers. One area that particularly interests me is building systems that handle complex workflows while maintaining performance and reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your project.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
