I am writing to apply for the Backend Developer position at 360Dialog. As a software engineer with over four years of professional experience in full-stack and backend development, I am confident in my ability to contribute to your WhatsApp platform for Independent Software Providers.

My backend expertise centers on Laravel and Node.js, where I have designed and integrated RESTful APIs, implemented authentication and role-based access control, and optimized database performance using MySQL and PostgreSQL. I also have hands-on experience with Redis, Socket.IO, and microservices architecture, which are relevant for building scalable, real-time communication systems.

In my professional experience at Explo-IT, I built and maintained scalable web applications using Laravel on the backend and Next.js on the frontend. I delivered RESTful APIs for seamless data exchange, implemented secure payment gateways, and optimized application performance through query tuning and caching strategies. I also deployed and maintained applications on Linux servers using Nginx and Docker with CI/CD pipelines.

One area that particularly interests me about 360Dialog is its focus on WhatsApp-based communication for Independent Software Providers. My work on real-time features using WebSockets and Socket.IO aligns well with the messaging infrastructure your platform relies on. I am comfortable working across the full stack but especially enjoy backend architecture, API design, and system reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background fits the needs of your team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
