I am writing to apply for the Backend Developer position at 360Dialog. Your work as the leading WhatsApp platform for Independent Software Providers is impressive, and I am interested in contributing to the backend systems that power your services.

My professional experience centers on building and maintaining scalable backend architectures. I have worked extensively with Laravel and Node.js to develop RESTful APIs, implement secure authentication and role-based access control, and integrate real-time communication using WebSockets and Socket.IO. I also have hands-on experience with MySQL and PostgreSQL for database design, query optimization, and performance tuning.

In previous work, I delivered production-ready backend features including payment gateway integration, third-party API connections, and real-time notification systems. I deployed and maintained applications on Linux servers using Docker, Nginx, and CI/CD pipelines, ensuring reliability and smooth operation. I also built a real-time server health monitoring dashboard using Node.js, Express, Socket.IO, and Docker, which demonstrates my ability to create systems that stream live metrics and maintain high availability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my backend development experience aligns with the needs of 360Dialog.

Sincerely,

Md Shahanur Islam Shagor
