I am writing to express my interest in joining Irion. Your focus on data management innovation for large enterprises and the emphasis on continuous growth, flexibility, and a supportive work environment align well with what I value in a professional setting.

I am a Full-Stack & AI Engineer with over four years of professional experience building and deploying web applications. My technical foundation includes Laravel, Next.js, React, Node.js, TypeScript, and modern frontend frameworks. I have worked extensively with RESTful APIs, MySQL, PostgreSQL, and real-time communication using WebSockets and Socket.IO.

In my previous role at Explo-IT, I designed and developed scalable web applications using Laravel for backend logic and Next.js for responsive, SEO-friendly interfaces. I implemented authentication systems, role-based access control, and secure payment gateways. I also optimized database performance through query tuning and caching strategies, and deployed applications on Linux servers using Docker and Nginx.

One project I am particularly proud of is a multi-vendor e-commerce ecosystem built with Laravel and Flutter. It involved role-based access control, real-time notifications via Firebase, and integration with Google Maps API and Redis. The system coordinated customers, sellers, and delivery agents within a unified infrastructure.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Irion’s mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
