I am writing to apply for the Supply & Logistics Coordinator role at Nabu Casa. Your mission to build a sustainable, community-funded smart home platform that prioritizes privacy and choice is something I genuinely respect. The opportunity to own the end-to-end hardware supply chain for Home Assistant, from manufacturers to millions of homes, is exactly the kind of operational challenge I want to take on.

My background is in software engineering, but I have always worked at the intersection of technical systems and operational workflows. I have experience coordinating complex projects across international teams, managing timelines, and ensuring smooth delivery under real-world constraints. I am comfortable using data and reporting to drive decisions, and I have built automation workflows using AI tools to improve efficiency.

One area that particularly interests me is the chance to build structure from scratch. I have experience documenting processes, writing SOPs, and improving workflows in environments that were deliberately light on process. I know how to take ownership of a function, identify bottlenecks, and create repeatable systems that scale as the company grows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills can support Nabu Casa’s continued growth.

Sincerely,

Md Shahanur Islam Shagor
