I am writing to apply for the Supply & Logistics Coordinator role at Nabu Casa. Your work behind Home Assistant, the world's largest open-source smart home platform, is something I have followed with genuine interest. The mission to build sustainable, privacy-focused technology that serves millions of real homes aligns closely with how I approach my own work.

My background is in full-stack and AI engineering, but what draws me to this role is the operational and analytical side of the work. I have experience building systems that require coordination across multiple components, managing data flows, and automating repetitive tasks. I am comfortable using reporting and forecast data to make decisions, and I have hands-on experience with AI-assisted workflows that can streamline supply chain operations.

One area that particularly interests me is the emphasis on building structure and documenting processes as SOPs. In my previous work, I have consistently created clear documentation and repeatable workflows to ensure projects scale smoothly. I am used to operating with high ownership and minimal supervision, which matches the autonomy this role demands.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
