I am writing to apply for the Supply & Logistics Coordinator role at Nabu Casa. Your mission to build a sustainable, community-funded smart home platform that prioritizes privacy and choice is something I genuinely respect. The opportunity to own the end-to-end hardware supply chain for Home Assistant, a project used by millions, is compelling.

My technical background includes working with AI-assisted workflows and automation tools, which directly supports your goal of using modern technology to improve supply chain efficiency. I have experience deploying and maintaining systems on Linux servers using Docker, Nginx, and CI/CD pipelines, and I am comfortable working with cloud platforms like AWS and Google Cloud. This technical fluency allows me to analyze forecast data, manage inventory systems, and build the structured, repeatable processes this role requires.

In my professional experience as a Web Developer, I have taken full ownership of projects from planning through deployment. I coordinated with stakeholders, documented workflows as standard operating procedures, and ensured smooth delivery across multiple environments. I am used to working independently in remote settings and driving issues to resolution without needing daily oversight.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my skills can support Nabu Casa’s growing hardware operations.

Sincerely,

Md Shahanur Islam Shagor
