I am writing to apply for the Strategy & Operations Manager (f/m/d) position at Nox Mobility. Your mission to replace short-haul flights with premium overnight trains is a bold, practical solution to a real environmental and travel problem. I want to help bring that vision to life.

My background is in software engineering, but my work has always been about more than writing code. I have consistently taken ownership of end-to-end product delivery, managed complex projects with multiple stakeholders, and made data-informed decisions to meet commercial and operational goals. I am comfortable building from scratch, prioritising ruthlessly, and adapting quickly to new challenges.

In my professional experience, I have led the development and launch of full-stack platforms, coordinated with external partners, and delivered measurable results. I have used AI tools and data analysis to inform strategic decisions, and I have built systems that scale. I am used to taking responsibility from day one and shaping outcomes with my own hands.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am ready to bring my execution-focused mindset, strategic thinking, and hands-on approach to Nox. I have attached my CV for your review and look forward to discussing how I can contribute to launching and running your first line.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
