I am writing to apply for the Controller (m/w/d) position at pritidenta GmbH. While my professional background is in software engineering, I bring strong analytical capabilities, a structured approach to data, and experience building systems that track, report, and optimize key metrics.

In my previous work as a Web Developer, I designed and developed a real-time server health monitoring dashboard that tracked availability, latency, and performance of multiple systems simultaneously. This required defining KPIs, setting up data pipelines, creating visual reports, and continuously refining the system based on operational needs. I worked closely with cross-functional teams to ensure the metrics were accurate and actionable.

One area that particularly interests me is the opportunity to build and maintain a KPI-driven steering system for management and departments. My experience with databases (MySQL, PostgreSQL), reporting tools, and process optimization aligns well with the responsibilities of this role. I am comfortable working with data, identifying trends, and presenting findings clearly.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my analytical skills and structured approach can contribute to pritidenta GmbH.

Thank you for your consideration.

Sincerely,

Md Shahanur Islam Shagor
