I am writing to apply for the Duales Studium - Softwareentwicklung position at FinMent GmbH. Your mission to democratize access to institutional investment strategies through technology resonates with my own interest in building practical, user-focused financial systems.

Through hands-on project development, I have built full-stack web applications using JavaScript, React.js, Node.js, HTML5, and CSS â the core technologies you mentioned. I have experience working across the entire development cycle, from architecture design to deployment, which aligns with your full-stack development responsibilities.

One project that directly relates to your work is an AI-powered financial application I developed. I built the backend API using Express, TypeScript, and OpenAI, integrated AWS services for authentication and file processing, and implemented AI assistants trained on custom datasets. This experience connects to your focus on feature engineering and using modern AI tools to write smarter code.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to FinMent’s product development team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
