I am writing to apply for the Junior Webentwickler (m/w/d) - Node / React position at FinMent GmbH. Your mission to democratize access to institutional investment strategies through innovative technology is something I find genuinely compelling, and I would welcome the opportunity to contribute to your FinTech platform.

My technical background is built around the same technologies you are using. I have professional experience developing full-stack applications with JavaScript, React, Node.js, HTML5, and CSS. I prioritize clean code, component reusability, and responsive design in every project I work on.

In my previous role as a Web Developer, I was involved in the full development lifecycle of web applications. I built and integrated RESTful APIs, implemented authentication and role-based access control, and created responsive, SEO-friendly user interfaces with Next.js and Tailwind CSS. I also worked with databases like MySQL and PostgreSQL, and deployed applications on Linux servers using Docker and Nginx.

One project that closely aligns with this role is Smart Finance, a full-stack personal finance management platform I built using Next.js and Node.js. It features real-time updates, secure authentication, and a modular architecture designed for maintainability and performance. This experience has prepared me well to contribute to building innovative investment systems for private investors.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and look forward to the possibility of discussing how I can contribute to FinMent’s mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
