I am writing to apply for the Senior E-Commerce Operator role at Berend Heins GmbH. The idea of translating your team's deep advisory experience into AI-driven, repeatable workflows is exactly the kind of challenge I want to take on.

My background combines full-stack web development with practical AI integration. Over the past four years, I have built and maintained production systems using Laravel, Next.js, React, and Node.js, with a strong focus on automation, API design, and performance optimization. I have also worked extensively with AI tools, including training custom assistants using OpenAI and integrating image processing via Replicate API.

What stands out to me about this role is the emphasis on building the operational backbone of the company. In previous work, I developed a multi-vendor e-commerce platform that connected customers, sellers, and logistics teams through a unified system with role-based access, real-time updates, and automated workflows. That project required the same combination of technical ownership, cross-functional coordination, and process thinking that you are looking for.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to building your new operational standards.

Sincerely,

Md Shahanur Islam Shagor
