I am writing to apply for the Backend Developer role at 360Dialog. As a full-stack and backend engineer with four years of professional web development experience, I am drawn to the opportunity to contribute to a platform that serves Independent Software Providers at scale.

My backend work centers on building reliable, secure, and performant APIs. I have worked extensively with Laravel and Node.js to design RESTful services, implement authentication and role-based access control, and manage data across MySQL and PostgreSQL databases. I also use Redis for caching and Socket.IO for real-time communication when needed.

In previous professional roles, I delivered backend features that included payment gateway integration, third-party API connections, and database optimization through query tuning and indexing. I deployed and maintained these systems on Linux servers using Docker, Nginx, and CI/CD pipelines, ensuring stability and performance in production environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

My CV is attached for your review. I welcome the opportunity to discuss how my backend experience aligns with the needs of 360Dialog.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
