I am writing to apply for the Junior Web Designer position at INFUSE. Your commitment to innovation and your work with major global clients like Microsoft, Google, and Intel make this an exciting opportunity to contribute to high-impact visual projects.

My background combines practical web development skills with a strong foundation in design. I work comfortably with HTML and CSS to build clean, responsive layouts, and I use Figma for prototyping and interface design. I understand design theory, typography, and color, and I apply these principles to create user-friendly and attractive visual content.

In previous work, I have created landing pages, designed email layouts, and built banners that align with brand guidelines and campaign goals. I am comfortable working from ready-made templates or building from scratch when needed. My experience with frontend frameworks like React and Next.js also gives me a broader understanding of how design translates into functional web interfaces.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my attention to detail, creative thinking, and willingness to learn to the INFUSE team. I have attached my CV for your review and welcome the opportunity to discuss how I can contribute to your design projects.

Sincerely,

Md Shahanur Islam Shagor
