I am writing to apply for the 3D Artist Blender & Realtime-Anwendungen (m/w/d) position at MY Humancapital GmbH in Munich. The role focuses on creating complex 3D animations and graphics for digital learning and training applications using Blender, developing assets for VR, AR, and real-time applications with game engines like Unity or Godot, and optimizing CAD data for real-time performance.

My technical foundation in software engineering and systems development provides a strong base for this role. Through my work in full-stack development and autonomous systems, I have gained practical experience with C++ and Python, which are directly applicable to developing real-time 3D applications and optimizing assets for performance. I have worked on projects involving real-time data processing, low-latency communication, and system optimization, all of which translate well to the demands of creating efficient 3D content for interactive environments.

One area that particularly interests me is the optimization of 3D models for real-time applications. In my project work, I have focused on performance tuning and resource management, skills that are directly relevant to reducing geometry and preparing CAD data for real-time use. I am comfortable working with technical constraints and finding efficient solutions to maintain visual quality while meeting performance requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
