I am writing to apply for the Pharmaceutical Research Specialist role at CuraSenseAI. The opportunity to contribute to research-driven work in a technology-enabled environment aligns well with my background in software engineering and AI.

Through research and development work, I have built systems that require careful data handling, model evaluation, and performance tuning. One example is the Wireless Vision-Aid for the Blind project, where I implemented YOLOv8n-based object detection and optimized it for real-time, offline operation. This involved working with datasets, testing accuracy, and ensuring reliable output under constrained conditions.

My technical experience includes Python, machine learning integration, and building end-to-end applications that process data and deliver actionable results. I am comfortable working with APIs, databases, and deployment pipelines, which supports the infrastructure needs of pharmaceutical research platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can support CuraSenseAI’s research objectives.

Sincerely,

Md Shahanur Islam Shagor
