I am writing to apply for the Director of Technical Solutions role at Triple Whale. Your focus on building an AI operating system for modern ecommerce that turns complex data into actionable outcomes aligns with my experience in full-stack development and AI engineering.

Triple Whale's approach to pulling every business signal into one place and using AI to execute decisions is particularly interesting. The idea of building systems that don't just surface insights but take action is something I have worked toward in my own projects.

Through my professional experience as a Web Developer, I have designed and built scalable web applications using Laravel and Next.js, developed RESTful APIs, and implemented authentication, role-based access control, and payment integrations. I have also worked with MySQL, PostgreSQL, and Redis for data management, and deployed applications on AWS with Docker and Nginx. These skills map well to the technical depth required in Solutions Architecture and Context Engineering.

One area that particularly interests me is the integration of AI into practical business workflows. I have built AI-powered assistants using OpenAI and integrated image processing APIs, and I have experience with real-time features using WebSockets and Socket.IO. This background supports the kind of actionable AI and automation that Triple Whale delivers through Moby 2.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background can contribute to Triple Whale's mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
