I am writing to apply for the Healthcare Manager role at CuraSenseAI. The opportunity to drive high-impact healthcare operations through technology and real-world evaluation aligns with my experience building intelligent systems that solve practical problems.

Through my professional work as a full-stack and AI engineer, I have designed and deployed platforms that combine backend architecture, real-time data handling, and AI-driven features. I have built RESTful APIs, integrated payment systems, implemented role-based access control, and deployed applications on cloud infrastructure. These projects required clear planning, cross-team coordination, and a focus on delivering reliable, scalable solutions.

One area that particularly interests me is applying automation and intelligent workflows to operational challenges. In previous projects, I have integrated AI assistants, automated data processing, and built real-time monitoring dashboards. These experiences have taught me how to translate complex requirements into systems that improve efficiency and support decision-making.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to CuraSenseAI’s mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
