I am writing to apply for the Director Operations Logistics position at Cloetta. Your mission to build a scalable U.S. operational backbone from the ground up resonates with my own experience designing and deploying complex systems from scratch.

My professional background is in full-stack software engineering and systems architecture. Over the past four years, I have built and scaled production platforms using Laravel, Next.js, Node.js, and Docker, managing everything from database design and API development to server deployment and real-time monitoring. This work required the same kind of strategic thinking, partner coordination, and hands-on leadership that this role demands.

In previous work, I designed a real-time server health monitoring dashboard that tracked availability, latency, and system metrics across multiple targets simultaneously. I built the entire architecture from the ground up, selecting the technology stack, implementing role-based access control, and deploying it in a fully Dockerized production environment. This experience taught me how to build reliable, scalable systems while maintaining cost discipline and operational control.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in building scalable systems can contribute to Cloetta’s U.S. expansion.

Sincerely,

Md Shahanur Islam Shagor
