I am writing to express my interest in joining US Mobile. Your mission to build a software platform that unifies connectivity across phones, smart devices, cars, and home broadband is exactly the kind of ambitious, infrastructure-level challenge I want to work on.

My background is in full-stack development with a focus on scalable web applications. Over the past four years, I have worked extensively with Laravel, Next.js, React, and Node.js, building systems that handle authentication, real-time communication, payment integration, and database optimization. I also have experience deploying and maintaining applications on AWS, using Docker and Nginx for containerized production environments.

One area that particularly interests me is building platforms that serve multiple user roles and devices. In a recent project, I developed a multi-vendor e-commerce ecosystem with a Laravel backend and multiple Flutter-based mobile apps for customers, sellers, and delivery agents. The system included role-based access control, real-time notifications via Firebase, and Redis-based caching for performance. This experience taught me how to design APIs and data flows that work reliably across different clients and scale under load.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills could contribute to US Mobile’s growth.

Sincerely,

Md Shahanur Islam Shagor
